

ARCHIVIST™ SOLUTION FOR JD EDWARDS®

Archivist™ by Essentio has been developed with JD Edwards EnterpriseOne® and JD Edwards World® customers in mind to achieve unparalleled enterprise data management.

Maintain integrity of your JD Edwards® data

One of the biggest reasons purging and archiving of data in JD Edwards is difficult is due to interdependencies between modules. JD Edwards provides standard reports to verify data integrity. If data is removed without understanding the impact, these integrity reports will not function properly and the impact to daily user functions could be worse still. Our proven methodology accounts for these integrities and does not create undesirable side-effects.

Dramatically improve system performance:

Speed up day to day activities such as: Customer Service Inquiry, Item Ledger Inquiry, Picklist Print, Account Ledger Inquiry, nightly batch jobs.

Archive without interruptions

Archivist™ will continue archiving your data regardless of whether JD Edwards is up and running or if it is shut down for maintenance (ex: Package deployments). In the event a live archival process must be suspended, for example to perform routine database maintenance, it can be easily resumed at a later time.

Upgrade faster

It goes to reason, the larger your database, the longer data conversion will take during your upgrade. Archiving your data first will minimize the amount of time required for data conversion; thus, allowing you to go “live” and resume normal business operations much faster.

Template based approach

Our standard templates for each module can be used to quickly implement archival or purge processes. These templates can be easily modified to the needs of your business. Additionally, custom tables can be added to existing templates with almost no effort.

Based on our knowledge and best practices, we have also packaged archival processes for standard JD Edwards® modules to save you the effort of recreating the logic. Here is a list of some of the pre-packaged JD Edwards® archival processes:

- Sales Orders
- Purchase Orders
- Accounts Receivable
- Accounts Payable
- General Ledger
- Inventory
- Work Orders
- Real Estate
- Several others
